

1 **ABSTRACT OF THE DISCLOSURE**

2 A water fountain includes a basin, multiple water pumps in the space of the
3 basin for pumping the water in the space, an annular disk securely supported by an inner
4 face of the basin and having a centrally defined hole and multiple through holes in
5 communication with the outlets of each of the water pumps via pipes such that water
6 pumped by the water pumps is able to be ejected out of the annular disk from the
7 through holes, a sphere securely supported by a periphery defining the hole of the
8 annular disk and a light emitting diode assembly received in the hole of the annular disk
9 for emitting colorful light beams. A circuit board is sandwiched between a bottom of the
10 basin and a cap for providing electricity to the water pumps and the light emitting diode
11 assembly.
